

Educational Guide & Comparison of Linux Migration Services

Service Fee: Rp 50,000 (Virus-Free Guarantee & Optimal Performance)

Theresa Pogon (akanra-dev)

August 2026

Main Target: Residents, Schools, Foundations & Institutions across Flores Land, NTT

1. Cost Comparison: Windows vs. Linux

Component	Conventional Windows Path	Open-Source Linux Path (Zorin / Mint / MX)
OS License	Rp 2,500,000 – Rp 3,500,000	Rp 0 (Free & Legal for Life)
Office License	Rp 1,200,000 / year	Rp 0 (LibreOffice / OnlyOffice built-in)
Antivirus Burden	Rp 300,000 / year (makes it slow)	Rp 0 (Linux kernel structure is secure, virus-resistant)
Old Hardware Solution	Forced to buy a new laptop (Rp 6–8 Million)	Transform an Old Laptop to Be Fast (Rp 0)
Total Investment	> Rp 4,000,000 / Unit	Only Rp 50,000 (Installation & Education Service)

2. 5 Strong Reasons You Must Switch to Linux

- **Free from Pirated Licenses & Hidden Costs:** The entire system is purely Open-Source. Free from legal issues and no forced updates that damage data.
- **Ultra-Fast Performance on Old Hardware:** Stops background bloatware. Super-short boot time and more efficient battery usage.
- **Immunity from Flash Drive Viruses:** Linux's POSIX permission architecture prevents automatic executables (.exe/.vbs) that commonly damage residents' work documents on Windows.

- **Windows & Mac-like Interface:** The Zorin OS and Linux Mint options are very intuitive. No need to relearn from scratch; the Start button, Taskbar, and File Manager stay in the same place.
- **Budget Savings for Recovery:** The millions of rupiah that would be spent on software licenses can be fully allocated to family needs & infrastructure repairs.

3. Debunking Linux Myths

Myth 1: “Linux is hard, you have to keep typing in black text (Terminal)!”

Fact: Modern distros like Zorin OS & Linux Mint are 100% graphical interface (GUI). Opening apps, browsing, and opening files is just clicking like usual.

Myth 2: “Microsoft Office files (Word/Excel) can’t be opened on Linux!”

Fact: LibreOffice and OnlyOffice, installed automatically, are 100% compatible for reading and saving .docx, .xlsx, and .pptx formats.

Myth 3: “Linux can’t use Printers or Wi-Fi!”

Fact: Modern Linux has very broad built-in driver support. Plug-and-play for the majority of Wi-Fi, monitors, and printers without needing an installer driver CD.

4. Hardware Specification Matrix & Distro Recommendations

Distro recommendations based on device specifications:

RAM	Storage	Distro Choice	Character
2 GB – 4 GB	Old HDD / SSD	MX Linux (XFCE Edition)	Very light, idle RAM usage only ~600 MB, focused on responsiveness on old hardware
4 GB – 8 GB	SSD (SATA/ NVMe)	Linux Mint (Cinnamon / MATE Edition)	Very stable, Windows 7/10-like look, very mature software ecosystem for offices & schools
4 GB – 16 GB	Modern SSD	Zorin OS (Core / Education)	Modern sleek visuals like Windows 11 / macOS, includes a complete education app arsenal for students & campus

5. Before vs. After Benchmark Metrics

Parameter	Windows 10/11 (Initial Condition)	Linux Open-Source (Final Condition)
Boot Time	60–90+ Seconds (Slow)	8–15 Seconds (Very Fast)
Idle RAM Usage	3.2 GB – 4.5 GB	600 MB – 1.2 GB
CPU Temperature & Fan	Hot & Noisy Fan	Cool & Silent
Security Resilience
